Secure Simple Access

Secure, Simple Access to Every Application, in the Enterprise and in the Cloud

SecureAuth Corporation:

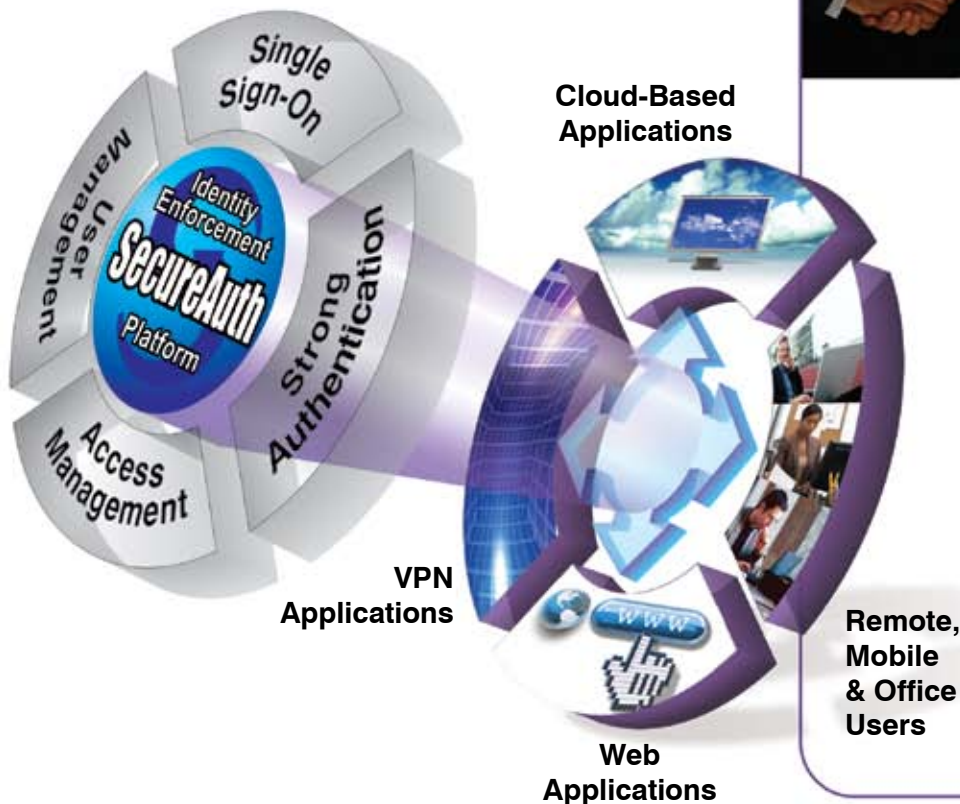

A History of Innovation

SecureAuth has a history of delivering innovative, reliable solutions that secure and simplify access to enterprise and cloud applications. SecureAuth solutions are known for their ease of use, rapid deployment and comprehensive management capabilities.

SecureAuth: Your Pathway to the Future

The foundation for SecureAuth's solutions is the SecureAuth Identity Enforcement Platform (IEP). SecureAuth IEP is the industry's first appliance-based platform to integrate strong authentication, SSO, access, and user management services for every cloud, web and VPN application. This unique approach ensures that any organization can easily adhere to security and compliance regulations with a single solution that is configurable to meet your specific security requirements.

SecureAuth is uniquely different from other products that only provide one security function – either authentication, SSO, access or user management – and can't support cloud, web and VPN applications in a single solution.

Top 5 Reasons Why You Can Depend on SecureAuth Corporation

- 1 Marquee customers include American Eagle Outfitters, Antares Management Solutions, Cinemark, Carnegie Mellon University, Carolina HealthCare Systems, DISH Network, Farmers and Merchant Bank, Lord & Taylor, LexisNexis, MLS.com, Ticketmaster, Yamaha and many more.
- 2 Top-tier industry partners include Cisco, IBM, Juniper, Microsoft, Google, CA Technologies and Salesforce.com.
- 3 99% customer retention rate year-over-year.
- 4 97% of customers complete their initial deployment within one to two days.
- 5 Patent-pending technology protects intellectual property and increases stakeholder value.

The Security and Compliance Challenge

To meet security and compliance demands, organizations have implemented siloed solutions in an effort to help simplify and secure access to web and VPN applications. Now understaffed IT departments are mandated to support cloud-based applications and manage even more siloed security products which increase the risk of security gaps and non-compliance.

While the benefits of the cloud, Single Sign On (SSO), and strong authentication far outweigh the cost of a security breach, the prospect of securely extending your enterprise to the cloud can be daunting.

SecureAuth IEP: Your All-in-one Solution

SecureAuth IEP, the industry's first appliance-based Identity Enforcement Platform, delivers the following benefits for which SecureAuth Corporation is known:

Increased Security

- Enables any organization to secure access to every cloud, web and VPN application in a single solution.
- Mutual authentication protects every application, including cloud-based applications, from identity theft.
- User identities and access controls are securely stored within your protected enterprise.

Secure Simple, End-user Access

- An intuitive, familiar user experience instills confidence and speeds adoption.
- No tokens to carry, manage, or lose.
- Automated self-enrollment enables users to gain immediate access from any location at any time.
- Desktop SSO provides authenticated users instant, transparent access to cloud-based applications.

Automatic Integration with Existing Directory Servers

- Integrates directly with Active Directory and other industry leading directories to reduce management overhead and the number of user names and passwords to remember.
- Automatically translates different identities for cloud and local applications.
- Deliver a transparent user experience with a secure SSO between applications.
- Hybrid architecture enables cloud-based applications to become part of the extended enterprise by leveraging existing directories.

Streamlined Deployment

- Go from installation and deployment to production in days, not weeks or months.
- No modifications to applications or API are required.
- Eliminates hardware tokens, deployment of client software, upgrades, or user training.

Cost Effective

- Only purchase one product to secure and simplify access to every cloud, web and VPN application.
- Configurable to meet strong authentication needs today and address SSO, access, and user management services tomorrow or in the future.
- Meets every PCI DSS criteria for two-factor authentication while eliminating investments in hardware tokens, data servers or infrastructure.
- SecureAuth is a fraction of the cost of hard tokens.

Secure Simple Access

SecureAuth: Unprecedented Value for Enterprise and Cloud-based Applications

Enterprise Control

- SecureAuth enforces access control from your existing directory for all network and application resources, including the cloud.

Increased Compliance-Audit Pass Rates

- All the administrative tools and practices IT administrators need to meet existing and pending regulations are included.

Improved Productivity

- Users can work seamlessly across every business application without distractions caused by multiple logins or forgotten passwords.
- SecureAuth provides all the benefits of enforced authentication without affecting productivity.

Cost-effective Implementation

- Organizations can leverage the scalability and cost savings of the cloud without sacrificing security, increasing head count or adding complexity.

Secure Simple Access
