

NetVision Partners with eB2Bcom to Expand Delivery of Access Rights Systems Management Solutions in Asia Pacific

American Fork, UT; Melbourne, Australia; and Singapore – February 3, 2011 – NetVision, Inc., a provider of compliance and control solutions for enterprise network access, together with eB2Bcom, a leading value added reseller for Asia Pacific, today announced that they have entered into a reseller agreement. Under the terms of the partnership, eB2Bcom will sell and support NetVision’s family of access rights reporting and monitoring solutions throughout Australia, New Zealand, Singapore and other areas within the Asia Pacific region, to enterprises seeking to reduce the cost and complexity of compliance and audit.

“eB2Bcom has the expertise and track record we look for in a partner, while providing an influential channel for us to access organizations in strategically targeted regions throughout Asia Pacific.” said David Rowe, CEO of NetVision, Inc. “By making our access rights systems management solutions more widely available, we hope to give enterprises in this region the tools they’ve been looking for to more effectively determine who within their organization has access to what file systems, as well as how they got it and how they’re using it.”

The NetVision family of access rights reporting and monitoring solutions enables organizations to easily and automatically obtain the most relevant and actionable information needed to protect their assets, mitigate risk, and reduce the cost and complexity of compliance and audit. Unlike other tools that solely collect and store logs, or deliver reports that contain incomplete or irrelevant data, NetVision’s solutions provide the intelligence and comprehensive visibility organizations need to recognize threats immediately and respond quickly. NetVision’s solutions are simple to deploy and use, with no requirement for specialized in-house expertise.

eB2Bcom was founded in 1997 and is a leading value added reseller for Asia Pacific with specific expertise in the areas of Identity & Access Management, IT & Data Security and specialist solutions for the Defense, Police, Homeland Security and Intelligence sectors. The company supplies software, products, consulting, implementation, training, and continuing support to end users, partners, integrators and prime contractors throughout the region.

“The products that we sell and support are technologies that can be implemented quickly and without significant upfront expense or deployment costs,” said Adam Neale, national sales manager, ANZ at eB2Bcom. “NetVision’s family of products fits the bill by delivering tools that are easy to use and provide immediate answers to critical identity and access rights questions at an affordable cost.”

“Our clients trust eB2Bcom to provide best-in-class, cost effective, rapidly deployable solutions,” commented Kevin Lam, regional sales manager, Asia at eB2Bcom. “NetVision fits nicely into our existing portfolio and our clients are excited by Netvision’s ability to solve one of their biggest challenges: satisfying their auditors with concise and comprehensive access rights and resource permissions information.”

eB2Bcom will sell and support the complete NetVision product family, including:

- **NVMonitor** enables real-time monitoring of access rights, administrative activity, and user behavior across network directories such as Microsoft Active Directory, Novell eDirectory, NetApp Network Attached Storage (NAS), and related file systems. The solution evaluates who is opening, creating, or changing files, and enables real-time response based on a

number of critical factors such as which file is affected, who did it, and even what time of day it is.

- **NVAssess** enables automated reporting of user accounts and group memberships in the network directory. Requiring no in-depth training, the NVAssess software allows companies to reduce costs by eliminating the manual collection process while providing an unparalleled ability to gather critical data.
- **Access Rights Inspector** provides detailed answers on access rights across Active Directory and Windows file system environments. Access Rights Inspector also automates the process of evaluating user and group permissions and identifying vital information such as inappropriate permissions, unused groups, high-risk accounts and files, and technical debris such as orphaned SIDs or circular group memberships.
- **SIMON** is NetVision's security suite offered to companies as a managed service. With SIMON, subscribers get all of NetVision's products' features, but without the need to purchase additional hardware, install and configure new software, or manage new policies.

About eB2Bcom

eB2Bcom is a privately-owned group with headquarters in Melbourne and Singapore. It has an excellent reputation for its Identity and Access Management expertise, and its implementation capability and support through the Asia Pacific region. The company was founded in 1997 and has a bluechip corporate and government customer base. For more information, visit www.eb2bcom.com

About NetVision, Inc.

NetVision offers access rights reporting solutions that enable organizations to easily and automatically obtain the most relevant and actionable information needed to protect their assets, mitigate risk, and reduce the cost and complexity of compliance and audit. NetVision's patented technology platform combines advanced event filtering with real-time monitoring, from-the-source data collection and a powerful and flexible reporting engine to deliver immediate answers to critical identity and access rights questions. Since the company's founding in 1995, more than 600 companies around the world have used NetVision to improve security, reduce risk, and enhance operational efficiency.
